

Missing generators for K. Mönig

Electroweak physics

- ϵ -polarization in WW -pairs

• under work with T. Ohl

→ few weeks

- $WW \rightarrow VV$ -scattering with anomalous couplings

• should come very soon from Kilian / Ohl

→ few days

Missing tools

- Energy flow essential to separate $\nu\nu WW$ from $\nu\nu Z Z$

⇒ need reliable E -flow in SLMOET

before TDR-results can be produced

- Mask needed for sep. of $ee WW$, $\nu\nu WW$

⇒ need realistic mask in SLMOET
